Art Unit: 2629

1. **Status:** Please all the replies and correspondence should be addressed to Examiner's new art unit 2629. Receipt is acknowledged of papers submitted on 10-03-2006 under amendments, which have been placed of record in the file. Claims 12,14,15,16,18 and 19 are pending in this action. Applicant has cancelled claims 1-11,13 and 17.

***Response to Amendment***

2. Applicant has amended independent claims 12 and 16 by adding objected claims 13, and 17 limitations. Applicant has cancelled claims 1-11,13 and 17; claims 12,14,15,16,18 and 19 are pending. Applicant's arguments, see Remark, filed 10-03-06, with respect to Claims 12,16 regarding "the input device includes: a tapping sound detector configured to detect a tapping sound made by a user on a screen to generate a tapping sound detection signal; a microphone detachably attached to the screen and in communication with the tapping sound detector; a converter configured to convert the tapping sound detection signal into the input operation signal simulating an operation of a specific input device; and an operation signal output device configured to output the input operation signal, wherein the image supply device prohibits output of a new input operation signal from the input device for a predetermined period of time after receiving a previous input operation signal from the input device" have been fully considered, searched and are persuasive as they do overcome prior art rejection; which puts application number 10611923 in condition for allowance.

3. Applicant amended the independent claims 12 and 16 has no new matters added to the claims. The amended claims do have support in specification.

*Allowable Subject Matter*

4. Claims 12,14,15,16,18 and 19 are allowed.

5. The following is an examiner's statement of reasons for allowance:

Applicant's argument filed on 10-03-2006 are convincing. As argued by applicant in remarks under claim rejection page 5, paragraph 4, and page 6, paragraphs 1,2 the prior art of Yavid et al. (US 2002/0125324 A1) in view of Coulter et al. (6,304,638); Westerman et al. (6,323,846 B1) and Feinstein (6,466,198 B1) fails to recite or disclose the uniquely distinct features represented by underlined bold claim below;

An image display system comprising: an image supply device; an image display device configured to display an image represented by image information supplied from the image supply device; and an input device configured to supply to the image supply device an input operation signal representing operations of a specific input device, the input device includes: a tapping sound detector configured to detect a tapping sound made by a user on a screen to generate a tapping sound detection signal; a microphone detachably attached to the screen and in communication with the tapping sound detector; a converter configured to convert the tapping sound detection signal into the input operation signal simulating an operation of a specific input device; and an operation signal output device configured to output the input operation signal, wherein the image supply device prohibits output of a new input operation signal from the input device for a predetermined period of time after receiving a previous input operation signal from the input device.
